Lazelight Launches Mini Rechargeable LED Torch for Remote Controls

25th July, 2019 – Lazelight's mini torch makes television viewing experience much better in dim light. Almost every home has remote control for TV and nearly all have no back lighting capabilities and due to that, people suffer plenty of problems and their eyes start paining. Often the eyes develop allergy while seeing at the remote control in dark. Lazelight understands all of these sufferings people witness when they want to enjoy TV viewing in dim light, thus the LED flashlight has now been introduced to overcome the problems.

The latest surveys done in the world reveal that majority of the people love watching television or movies in the dark. Therefore, with the common remote control, they find a lot of difficulties to view the buttons while being in the dark (through few television remote controls offer backlight functions but their light is not proper), Lazelight surpasses its competitors by producing a novel rechargeable mini flashlight which happens to be an Everyday Carry.

There are around 10 to 15 percent of new remotes available getting equipped with back-lighting but this happens to be no solution at all since it only illuminates the buttons not the text printed on the remote surface. Lazelight - Latest EDC Mini Torch in Town solves this problem by illuminating the entire remote control and you need not to have a permanent light stuck on your remote at all. You will be able to read the text and see the buttons very easily in the dark. Lazelight's new TV/PVR remote control mini LED torch is Crowdfunding.

This new product is a rechargeable mini flashlight that has been designed according to the needs of the TV viewers who love to watch television or movies in the dark to get a cinematic experience at their home.

Lazelight's rechargeable mini flashlight is perfect for those who want to light up dark paths or any devices and for those who are vision-impaired.

This mini LED light fits aptly on all remote controls and lights up the surface of the control that your remote becomes visible for you when the lights are off.
